

Description: The dataset provided in this project shows the annual transaction list for a store for the year of 2015. Each transaction is represented by a row and each column has different parameters related to that transaction; including the profit and different states where the store is located.

Aim: The aim of this project is to use Tableau to find those states which are the most profitable.

Result: The images shown below were processed using Tableau public and shows how much profit the store has made in different states. The top 5 states where the store made the most profit for 2015 were California, Texas, New York, Ohio, and Oregon.
